Jose Felipe Almeida da Silva

Backend-Focused Full-Stack Software Engineer | SaaS Founder | Integrations | AI | Scalable Architecture

Faro, Portugal | josefelipedev@gmail.com | +351 913 884 527 | linkedin.com/in/jose-felipe-almeida-da-silva-a29665210 | portfolio.josefelipedev.com

Professional summary

Backend-focused Full-Stack Software Engineer with 3+ years of software development in TypeScript, NestJS, Node.js, React and Python, building SaaS platforms, AI-powered communication products, event-driven microservices, real-time systems and API integrations. Founder and sole engineer of TheChats.me (AI-assisted messaging/CRM SaaS) and part-time Web Developer at Angry Ventures. Started in technical support with Linux, SSH, logs, VoIP and Asterisk, then moved into backend architecture, legacy refactoring and multi-tenant SaaS development. MSc student in Informatics Engineering at the University of Algarve.

Core value: combines production experience, customer-facing product context, scalable architecture, complex integrations and the ability to turn unstable legacy systems into more reliable, maintainable and scalable products.

Core technical skills

Category	Technologies / Keywords
Languages	TypeScript, JavaScript, Python 3.11, Kotlin, PHP, Java, C#, C
Backend	NestJS 11/10, Node.js, FastAPI, Express, Fastify, REST APIs, OAuth2, webhooks
Frontend	React 19/18, Next.js 15, Vite, Astro, Tailwind CSS, shadcn/Radix UI, Material-UI
Databases / ORM	PostgreSQL, MySQL, Drizzle ORM, Prisma, TypeORM, Sequelize, async SQLAlchemy
Messaging / realtime	RabbitMQ, Kafka, Redis, Socket.IO, Bull, event-driven architecture
AI / LLM	OpenAI, Anthropic Claude, Together AI, Ollama, Whisper, Hugging Face, Google Vision/Gemini, RAG, MCP Server
DevOps / Cloud	Docker, GitHub Actions (self-hosted runners), GHCR, Cloudflare Workers, Linux VPS, Nginx, WireGuard, Jest, Vitest, Cypress, Pytest
HPC / Academic	C, OpenMP, MPI, SLURM, POSIX semaphores, NumPy/SciPy, Jupyter, ArchiMate

Professional experience

Founder & Software Engineer | *TheChats.me*

Jan 2026 - Present | Faro, Portugal / Remote

- Founder and sole engineer of an AI-assisted customer messaging platform (website live chat, shared inbox and CRM) that includes DropHub, a multichannel e-commerce module; designing, building and running the product end to end.
- Built a multi-tenant microservices backend with Node.js, TypeScript and NestJS 11 on PostgreSQL (Drizzle ORM), Redis and RabbitMQ: ~50 modules, role-based access, plan-based feature gating and a 96-endpoint Admin API documented in OpenAPI/Swagger.
- Developed the React 19/Vite dashboard (36+ modules, typed API services, Zustand, TanStack Query, visual workflow/chatbot builder), an embeddable WebChat widget and an Astro marketing site and blog deployed on Cloudflare Workers.
- Built a real-time inbox over WebSockets (Socket.IO) with ticket workflows, SLA rules, CSAT surveys and analytics.
- Built the Python AI engine: RabbitMQ workers, multi-provider LLM agents (OpenAI, Anthropic, Together AI and self-hosted Ollama), an MCP server, RAG knowledge-base answers, ticket insights and lead scoring.
- Integrated Meta APIs (WhatsApp Cloud API, Instagram, Messenger) with OAuth and webhooks, Stripe billing and marketplace APIs (eBay, Etsy, WooCommerce, Vinted, Shopify) for DropHub, plus a Chrome MV3 extension.
- Run the infrastructure with Docker on Linux VPS servers, a WireGuard VPN, GitHub Actions CI/CD with self-hosted runners, GHCR and automated offsite backups; test suites with Jest, Vitest, Cypress and Pytest.

Web Developer | *Angry Ventures (part-time)*

Jan 2026 - Present | Portugal

- Developed and maintained web solutions, including WordPress plugins, fast WordPress maintenance tasks, React pages and technical improvements for digital products.
- Built a Google Chrome extension and implemented API integration features for external systems.
- Worked on integrations involving Cellebrite, eBay and Monday.com, connecting business workflows to third-party platforms.
- Delivered fixes, improvements and features with a focus on usability, maintainability, reliability and business requirements.

Mid-Level Developer | *Tallk.me*

Oct 2024 - Aug 2025 | Remote / Brazil

- Developed full-stack SaaS communication applications using Node.js, TypeScript, React.js, PostgreSQL, Redis, Kafka, Docker and Meta API integrations.
- Helped stabilize and modernize a legacy communication platform involving WhatsApp, VoIP, chatbots and WebChat, improving maintainability and reducing technical instability.
- Refactored legacy PHP/Laravel and Node.js modules with inefficient loops, repeated database operations and heavy data structures, including an approximately 77 MB JSON generated per customer.
- Contributed to service separation, moving parts of the system from a more monolithic structure to a more modular and distributed model.
- Used Docker to containerize parts of the system and prepare the architecture for horizontal scaling and possible future Kubernetes orchestration.
- Worked with Kafka for asynchronous messaging, Redis for caching/performance, PostgreSQL for persistence and OAuth2/webhooks for official Meta API and WhatsApp Business Platform integrations.
- Participated in weekly five-day sprints with task estimation from 0 to 10 points, usually taking around 30 to 50 points depending on priority, technical complexity and urgent customer issues.

Junior Developer | *Tallk.me*

Apr 2023 - Sep 2024 | Remote / Brazil

- Transitioned from technical support into software engineering, working on React.js pages, chatbots, automations and WhatsApp API integrations.
- Refactored and maintained legacy systems using PHP, Laravel and Node.js, supporting full-stack projects and relational database integrations.
- Contributed to production issue resolution, internal integrations and SaaS product improvements.

IT Support Analyst | *Tallk.me*

Dec 2022 - Apr 2023 | Brazil

- Delivered advanced technical support using SSH, log monitoring, failure analysis, service maintenance and production troubleshooting.
- Configured and optimized VoIP/Asterisk systems for customer environments.
- Collaborated with the development team on platform improvements, scripts and pages using PHP, JavaScript and React.js.

IT Support Intern | *Tallk.me*

Apr 2022 - Nov 2022 | Brazil

- Supported technical troubleshooting via SSH, log monitoring, tests, backend code reading and API integration tasks.
- Built a practical foundation in infrastructure, support, production systems, PHP, JavaScript, WordPress and debugging.

Mobile Developer | *Freelancer*

Mar 2024 - Sep 2024 | Remote

- Developed Flutter/Dart apps for e-commerce and service platforms, including payment gateway integrations, checkout, subscriptions, webhooks, 3-D Secure and tokenization.

Selected independent and personal projects

SemFiltro Edu / payments-api | *Education platform & payments microservice*

Personal product

- SemFiltro Edu: Higher-education guidance platform for Portugal (search, compare and apply to degrees) with a NestJS 11/TypeORM/PostgreSQL API, React 19/Vite 8 SPA, Socket.IO chat, AI assistant with per-plan daily limits, student housing and DGES data import.
- payments-api: Multi-product payments microservice (one Stripe account per product) extracted from a shared core service: short-lived JWT app claims, per-account webhook verification and normalized event forwarding to consumer apps.

FinPloit | *AI-powered personal finance platform*

Personal project

- Built a full-stack product: NestJS/Prisma/PostgreSQL API, React dashboard, native Kotlin/Jetpack Compose Android app, Redis, Google OAuth, 2FA/OTP, WhatsApp bot and AI-based receipt/image analysis.

JobTalk English | *AI English app for professionals*

Personal project

- Built a Turborepo monorepo with NestJS API, Next.js admin, React Native/Expo mobile and Kotlin Multiplatform app, integrating Together.ai, Whisper, real-time voice with Socket.IO and Expo/Firebase push.

Mini Sentry / MultiScraper / Instagram API | *Developer tooling and automation*

Personal projects

- Mini Sentry: self-hosted error monitoring platform with SDK, Fastify/Prisma API, Next.js dashboard, source maps, Web Vitals and email/Slack alerts.
- MultiScraper: Reusable FastAPI scraping API with Redis caching, Playwright fallback, SSRF protection and LLM-assisted extraction for Portuguese grocery prices, DGES/university course catalogues and jobs.
- Instagram API: NestJS API with instagram-private-api, session keeper, Prisma, Swagger and Docker.

Education

- University of Algarve - MSc in Informatics Engineering (Master's, 2nd cycle), Faro, Portugal | Sep 2026 - Expected 2028 (1st year, in progress).
- Coursework (1st semester): Machine Learning, Software Architecture, Modern Cryptography, Internet of Things, and Concurrent & Parallel Systems.
- Academic projects: OpenMP/MPI matrix multiplication with SLURM jobs for the Deucalion supercomputer; classic concurrency problems in C (fork, shared memory, POSIX semaphores); ArchiMate architecture model of Strapi CMS; linear regression and gradient descent with NumPy; research on encryption in 4G/5G networks.
- Instituto Federal Catarinense (IFC), Brazil - Internet Systems, 2020 - Dec 2024.

Certifications and courses

- Docker Fundamentals - containers, CLI, custom images and clusters
- Java Developer - DIO (OOP and Spring Framework)
- React Native Developer - DIO
- Microsoft Azure AI Fundamentals
- .NET Developer Training - DIO
- React.js & Next.js - Udemy
- PHP 7 Complete - Web Developer Course + Projects - Udemy
